Digimap Roam upgraded with Carto features

Choose your print scale, print sizes up to A0 and view 1:500 scale maps.

Digimap Roam has taken on some features previously only available in Carto. You can now select your own print scale and print paper sizes up to A0. Going a step further than Carto, Roam prints OS MasterMap at scales up to 1:100 and offers portrait orientation for all paper sizes.

Roam is also getting an extra zoom level at the most detailed end of the scale, allowing you to view the OS MasterMap data on screen at around 1:500.

MasterMap and Boundary Download retired

Now just one Data Download for all OS products.

OS MasterMap is now available from the Data Download service as well as all the products in the Boundary Download service; Boundary-Line, Code-Point and several EDINA made boundary and grid files. The easy to use interface for finding and downloading data is a great improvement over the older ones.

MasterMap Download and Boundary Download will be retired from service by the end of May 2013.

Geoforum 2013: Save the date

If you support the use of Digimap at your institution or use it for teaching then you will want to keep the 20th June free in your diary.

This year's Geoforum will be in London at The Congress Centre where we hope to let you try out our new developments.

Fieldtrip GB Mobile App

EDINA has launched a mobile app allowing you to capture data using your phone's GPS. High quality base maps can be saved to your phone for "offline" use in areas with poor reception.

Users can record simple text, images and audio or create custom data capture forms with the Authoring Tool. Data can be exported to your personal cloud storage or shared with others.
